

I am very concerned about the rollout of BPL and the potential interference it will cause to the Amateur Radio Service. The test data I have seen indicates that some amateur radio modes and frequencies will be rendered useless. The Part 15 rules should NOT be altered with regard to BPL, and the companies implementing the service must be bound to comply with the Part 15 rules (as they exist). I am also concerned about potential interference to BPL systems by amateur radio operators....BPL customers will tend to blame amateur operators instead of the BPL providers. Regarding this issue, any interference complaints submitted to the FCC regarding BPL interference must be dealt with in a serious and timely manner.

Thank you.
